

Tracking the authority visits / activities and their results

Authority visits and supervisions always mean extra charge, even if there's no raise of objection, or need of corrective actions. In case of any problem, the company faces multiplying tasks that has to be done and authentically confirmed – besides the daily routine, with tight deadlines, upon fine. It needs a complex teamwork of the participants to solve the problems within deadline – no matter how large is the company.

The LexSys module of FoodSys Quality Control and Technological Portal provides a solution which makes easier to track the fulfillment of the specified activities, and the impeachment of the responsibilities. The electronic document hand-

ling, the automatic notifications, and the online management of the processes help to avoid deadline overruns and further penalties.

The LexSys module:

- registers the decrees and the reports of authority supervisions
- sends automatic follow-up and deadline notifications to the executives (e.g. in case of corrective actions, fines sharing etc.)
- if a report turns into a decree, the system links the decree and the reports, and hereafter handle them as one.
- creates management reports quick and easy, thanks to user defined filter and search options

The benefits offered to You and your company:

- results and effects of authority visits are easy to handle
- easy to confirm towards the authorities when the corrective actions are completed
- comparable penalties, filtered by authorities, counties, amounts, time periods or warehouses
